*Microbial Pathogenesis* aims at being an active participant in the international research effort towards understanding infectious disease at the molecular level. High quality, originality of ideas, and significance to the field will be the foremost criteria for publication. To fulfil its goal, the journal publishes studies of basic mechanisms in the infectious process. These should focus on the role of individual genes and molecules as virulence factors of the pathogen or as determinants of susceptibility or resistance of the host. The molecular and cellular interactions during infection and recovery will be of particular interest.

## Changes in Eukaryotic Gene Expression in Response to Environmental Stress

*Edited by*
BURR G. ATKINSON DAVID B. WALDEN
March 1985, 400 pp., $65.00/ISBN: 0-12-066290-6

As the first attempt to integrate the subject, this book encompasses all current research on plants and animals, including the important work on *Drosophila*. The focus is on various aspects of the response of eukaryotic cells to heat stress and other physical, chemical, and biological stressors.

## Dinoflagellates

*Edited by*
DAVID L. SPECTOR
1984, 552 pp., $75.00/ISBN: 0-12-656520-1

This volume, a comprehensive, up-to-date treatise on the biology of dinoflagellates, begins with an introduction and taxonomic description of this group of organisms. It then addresses the following topics: cell biology, biochemistry, genetics, and evolution.
